

# Project **Scope**

## WHAT IS INCLUDED:

### 1. **2.1 Overview**

2. SecurePay Hub and ACH require several shopping cart modules plug ins as per the scope outlined above to be available to download to support its merchants. These modules are to be available both via the market place and to be sent direct to the merchants.

### 3. **2.2 How it Works**

4. Merchants wishing to access shopping carts that 'plug into' the Secure Pay Hub or AlphaHub can do so by selecting the required icon from the market place and by following the instructions on how to download and install.
5. Alternatively, the merchant can be sent the plug in on request and be sent the module via email along with installation instructions.

### 6. **2.3 Proposed Workflow**

#### 7. **2.3.1 Module Configuration**

The following fields have been identified as being In-Scope for Shopping Cart Plug in Module configuration:

➤ Payment Method Title ➤ Payment Method Name

➤ User ID

➤ Merchant ID

➤ Merchant TX ID ➤ Currency

➤ Test Mode Flag

#### **2.3.2 Core Module Features**

##### **Transaction types:**

➤ Authorise

- Authorise and capture (requires follow up API call)
- Allowed card types (Visa, M/C, Amex)
- Display receipt page (display result on hosted payment page once the payment is hosted) ➤ Store transaction response data against each other

### **Alternative Payments**

o POLi and PayPal. These are to be selectable on the hosted payment page and the different responses back to merchant need to be accounted so that settlement occurs correctly.

### **Card Capture (Transaction)**

o Card capture is to be via Hosted Payment Page

o Capture transaction via API called by a capture button against an authorised order in ADMIN. Allows

a merchant to flag that a transaction should be captured (settled) if the auth is successful

#### **1. 2.3.3 Branding**

2. The ability to be able to white label the plug- in icon is to be made available.  
The modules to the branded:

3. o 'SecurePay Hub and Magento 2.0 plug in

4. o SecurePay Hub and Open Cart Plug in

5. o SecurePay Hub and Woo Commerce Plug in o 'ACH' and Magento 2.0 Plug in

6. o 'ACH and Open Cart Plug in

7. o ACH and Woo Commerce Plug in

#### **8. 2.3.4 Documentation**

9. Documentation to be provided upon handover of code.

#### **2.3.4.1 Installation guides for each market place:**

- ➤ Installation Guide – Secure Pay Hub and Magento 2.0
- ➤ Installation guide – Secure Pay Hub and WooCommerce on WordPress
- ➤ Installation Guide – Secure Pay Hub and Opencart 2.3
- ○ Installation guides to be in pdf format.

○ Installation guides to cover scenarios of both new installations and also upgrade installations.  
 ○ Installation guides to also cover Payment Module configuration and Test Gateway Operation.

### **2.3.4.2 User Guides for each market place**

User Guides to include: Overview of Secure Pay Hub, Features list and release notes

1. **2.3.5 Submission to the Market Place**
2. Included is all work required to submit the plug in to the market place including documentation, release notes, screenshots
3. **2.3.6 Testing Requirements**
4. Test shopping carts (front end & backend) to be provided to ACH for testing  
 Test URL and login details to be provided
5. PC browsers to be compatible with: IE, Chrome, Firefox, Safari (current versions)  
 Mobile browsers to test: native iOS, Android, and Windows
6. Transaction types: Real time

### **Additional Requirements (Phase 2 Additions)**

#### **Card Capture**

- Token Storage Flag
- Pay with stored card: use stored card via API call for returning customers

#### **Alternative Payments**

Visa Checkout, UPOP, ApplePay (including changes required to interpret payment response and perform follow up settlement functions)

#### **Refunds**

Refund order via API called by a refund button on admin order screen

## **Cancel**

Cancel an authorisation via API called by a cancel button against an authorised order in admin
